

All you need to know about battery recycling

Batteries contain **corrosive materials and heavy metals** that can contaminate the environment.

Different types of batteries to recycle:

AA, AAA, AAAA,
D, C, N, 9-volt,
Button Cell

Did you know?

Rechargeable batteries have a **lower environmental impact** because they reduce the total number of batteries manufactured and entering the waste stream.

They contain metals such as:

Zinc

Steel

Manganese

These metals can be recycled for use in other applications.

The importance of recycling batteries

- ✓ Recycled batteries can be reused to make new products
- ✓ Recycled batteries mean less materials going into landfills
- ✓ Recycled batteries conserve natural resources
- ✓ Recycled batteries can be used to produce energy
